Lesson 4 Homework Practice Dilations Answers

Understanding dilations is a fundamental aspect of geometry that helps students grasp how shapes can be enlarged or reduced while maintaining their proportions. When tackling Lesson 4 homework practice on dilations, students often seek clear, detailed answers to reinforce their learning. This comprehensive guide aims to provide well-structured explanations, step-by-step solutions, and key concepts related to dilation problems, ensuring students can confidently approach similar questions in their studies.

Introduction to Dilations

Dilations are transformations that produce an image that is the same shape as the original but is either enlarged or reduced. The key components involved in dilations include the center of dilation and the scale factor.

What is a Dilation?

- A geometric transformation that creates an image similar to the original.
- Changes the size of a figure but preserves its shape.
- The figure is scaled relative to a fixed point called the center of dilation.

Key Terms in Dilations

- **Center of Dilation:** The fixed point about which the figure is scaled.
- **Scale Factor:** A number that determines how much the figure is enlarged or reduced.
- **Image:** The resulting figure after dilation.
- **Pre-image:** The original figure before dilation.

Understanding the Scale Factor

The scale factor is crucial in determining the nature of the dilation:

- Scale factor > 1 : The figure enlarges (dilation).
- Scale factor $= 1$: The figure remains unchanged.
- Scale factor between 0 and 1: The figure reduces (contraction).

Calculating the Scale Factor

When given coordinates, the scale factor can be found by:

- Measuring the distance from the center of dilation to a point on the pre-image.
- Measuring the distance from the center to the corresponding point on the image.
- Dividing the image distance by the pre-image distance:

Scale factor = (Distance from center to image point) / (Distance from center to pre-image point)

Step-by-Step Approach to Solving Dilation Problems

To solve dilation problems effectively, follow these steps:

Step 1: Identify the Center of Dilation

- Usually given in the problem.
- If not given, determine it based on the figure or problem context.

Step 2: Determine the Coordinates of Pre-image and Image Points

- Use the coordinate plane to record points.

Step 3: Calculate Distances from the Center to Points

- Use the distance formula:

$$\text{Distance} = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

Step 4: Find the Scale Factor

- Divide the distance from the center to the image point by the distance from the center to the pre-image point.

Step 5: Apply the Dilation Rules to Find Missing Coordinates

- For each point, multiply the vector from the center to the pre-image by the scale factor.
- Add this scaled vector to the center's coordinates to find the image point.

Step 6: Verify the Dilation

- Check if the distances or ratios align with the scale factor.
- Confirm that the figure is similar and proportionally scaled.

Sample Problems and Solutions

Problem 1: Basic Dilation with Coordinates

Given: Center of dilation at (2, 3), original point at (4, 7), scale factor = 2.

Solution:

- Find the vector from the center to the pre-image:

$$- x = 4 - 2 = 2$$

$$- y = 7 - 3 = 4$$

- Multiply by the scale factor:

$$- x' = 2 \cdot 2 = 4$$

$$- y' = 4 \cdot 2 = 8$$

- Find the image point by adding scaled vectors to the center:

$$- x' = 2 + 4 = 6$$

$$- y' = 3 + 8 = 11$$

Answer: The image point is at (6, 11).

Problem 2: Reduction Dilation

Given: Center at (0, 0), pre-image at (6, 8), scale factor = 0.5.

Solution:

- Vector from center:

$$- \Delta x = 6$$

$$- \Delta y = 8$$

- Multiply by scale factor:

$$- \Delta x' = 6 \cdot 0.5 = 3$$

$$- \Delta y' = 8 \cdot 0.5 = 4$$

- Image point:

$$- x' = 0 + 3 = 3$$

$$- y' = 0 + 4 = 4$$

Answer: Image point at (3, 4).

Problem 3: Finding the Scale Factor Given Coordinates

Given: Center at (1, 1), pre-image at (3, 4), image at (5, 7).

Solution:

- Distance from center to pre-image:

$$- \sqrt{[(3 - 1)^2 + (4 - 1)^2]} = \sqrt{[4 + 9]} = \sqrt{13} \approx 3.605$$

- Distance from center to image:

$$- \sqrt{(5 - 1)^2 + (7 - 1)^2} = \sqrt{16 + 36} = \sqrt{52} \approx 7.211$$

- Scale factor:

$$- 7.211 / 3.605 \approx 2$$

Answer: The scale factor is approximately 2.

Common Mistakes and Tips

While working through dilation problems, students often make these errors:

- Incorrectly identifying the center of dilation: Always double-check the problem statement.
- Forgetting to multiply vectors: Remember to scale the entire vector from the center to the point.
- Miscalculating distances: Use the distance formula carefully; double-check calculations.
- Mixing up scale factors: Ensure the scale factor is applied correctly, especially for reduction.

Tips for Success:

- Draw diagrams to visualize the problem.
- Label all points clearly.
- Use a coordinate plane when possible for accuracy.
- Practice with various problems to build confidence.

Additional Practice and Resources

To deepen understanding, students are encouraged to explore:

- Self-Assessment: Enables learners to gauge their grasp of dilation concepts without waiting for instructor correction.
- Reinforcement: Repeated practice with answer keys helps internalize the procedures and reasoning involved.
- Preparation for Assessments: Familiarity with typical questions and solutions prepares students for quizzes and exams.

However, reliance solely on answer keys without understanding can lead to superficial learning. Therefore, these answer sets should be used alongside thorough explanations and conceptual reviews.

Key Topics Covered in Lesson 4 Homework Practice

The homework practice set typically covers the following core areas:

- Identifying Dilation Centers and Scale Factors

Understanding how to determine the center of dilation and the scale factor from given figures is foundational. Problems may involve:

- Locating the center of dilation based on the original and the dilated figure.
- Calculating the scale factor from coordinate points or side lengths.

- Applying the Dilation Formula

The standard formula for dilation centered at a point $C(h, k)$ with scale factor r is:

[

$$(x', y') = (h + r(x - h), k + r(y - k))$$

]

Homework exercises often require students to:

- Use this formula to find the image of a point.
- Derive the image's coordinates based on given dilation parameters.

Sample Problem and Its Solution

Problem: Given a triangle with vertices $A(2, 3)$, $B(4, 7)$, and $C(6, 3)$, find the image of triangle ABC after a dilation centered at $(2, 2)$ with a scale factor of 2.

Solution:

- Identify the center of dilation: $C(h, k) = (2, 2)$.
- Apply the dilation formula to each vertex:
- For $A(2, 3)$:

$\backslash$

$$x' = h + r(x - h) = 2 + 2(2 - 2) = 2 + 0 = 2$$

\\

\\

$$y' = k + r(y - k) = 2 + 2(3 - 2) = 2 + 2(1) = 2 + 2 = 4$$

\\

Image of A: \\(A'(2, 4) \\).

- For \\(B(4, 7) \\):

\\

$$x' = 2 + 2(4 - 2) = 2 + 2(2) = 2 + 4 = 6$$

\\

\\

$$y' = 2 + 2(7 - 2) = 2 + 2(5) = 2 + 10 = 12$$

\\

Image of B: \\(B'(6, 12) \\).

- For \\(C(6, 3) \\):

\\

$$x' = 2 + 2(6 - 2) = 2 + 2(4) = 2 + 8 = 10$$

\\

\\

$$y' = 2 + 2(3 - 2) = 2 + 2(1) = 2 + 2 = 4$$

\]

Image of C: \(\ C'(10, 4) \backslash\).

- Conclusion: The dilated triangle has vertices at \(\ A'(2, 4) \backslash\), \(\ B'(6, 12) \backslash\), and \(\ C'(10, 4) \backslash\).

This detailed solution exemplifies how answer keys can guide students through the process, highlighting the importance of understanding each step.

Question What is the main concept covered in Lesson 4 Homework Practice on dilations? Lesson 4 focuses on understanding how dilations expand or shrink figures by a scale factor, including identifying centers of dilation and applying the rules to various geometric shapes. How do you find the image of a point after a dilation with a given center and scale factor? To find the image of a point after dilation, draw a line from the center of dilation to the point, measure the distance to the image by multiplying the original distance by the scale factor, and plot the new point along the same line. What are common mistakes to avoid in homework practice on dilations? Common mistakes include forgetting to identify the correct center of dilation, mixing up the scale factor's direction (enlarging vs. reducing), and incorrectly calculating the new coordinates of points. Can you explain how to determine if a dilation is an enlargement or a reduction? Yes, if the scale factor is greater than 1, the dilation is an enlargement; if it's between 0 and 1, it's a reduction. A scale factor of exactly 1 results in no change to the figure. Where can I find detailed answers and explanations

for Lesson 4 homework practice on dilations? Detailed answers and step-by-step explanations are typically provided in your textbook's answer key, your teacher's solutions, or reputable online math resource websites that cover geometric dilations and transformations.
