Analyzing the 6PH07 Mark Scheme 2011

The mark scheme for this paper offers a detailed breakdown of awarding marks based on student responses. Here, we analyze typical question types, common marks awarded, and best practices for scoring highly.

General Marking Principles

- Method marks: awarded for correctly applying the right physics principles, regardless of the final answer.
- Accuracy marks: awarded for correct numerical or factual responses.
- Quality of explanation: in longer questions, clarity, logical reasoning, and completeness contribute to higher marks.
- Significant figures and units: consistent use is vital; marks may be lost for neglecting units or significant figures.

Typical Question Breakdown and Mark Scheme Insights

- Mechanics and Motion

Sample Question: Describe how to determine the velocity of an object at a particular point using the principles of conservation of energy.

Mark Scheme Highlights:

- Recognize the initial potential energy (PE) and kinetic energy (KE).
- Set PE at starting point equal to KE at the point of interest (assuming no energy losses).
